SAFE OPERATION: READ THIS FIRST

- Read the entire unit manual before operating the Part Manipulator.
- Wear eye protection when operating this machine.
- Do not wear jewelry when operating this machine. Tie hair back when using this machine.
- Do not wear gloves when operating this machine.
- Do not use damaged, frayed or deteriorated air hoses and fittings.
- Remove any weight from the arm and disconnect the air supply before making any adjustments to the arm or performing any maintenance.
- Keep hands clear of pinch points on the unit when operating the Part Manipulator.
- Do not alter or modify the Part Manipulator Arm.
- Periodically inspect for damage, loose hardware or anything irregular on the Part Manipulator.
- Read the Midwest Specialties, Inc. Limited Warranty before performing any maintenance or repairs.

IT IS IMPERATIVE THAT THE TABLE OR MOUNTING SURFACE BE LAGGED TO THE FLOOR AND SECURE BEFORE INSTALLING THE PART MANIPULATOR. Failure to secure the table or mounting surface could result in serious injury to the operator as well as the Part Manipulator.

- Midwest Specialties, Inc. is not responsible for accident or injury resulting from the misuse of this machine or for use other than originally designed and intended.
- The Part Manipulator has both air restrictions and weight restrictions depending on the model. See the specifications page of this manual for these restrictions.
- The optional magnet has material, finish, size, shape and weight restrictions. See the specifications page of this manual for these restrictions.
Part Manipulator
Limited Warranty

A new Part Manipulator has a 3-year limited warranty on parts and labor. This warranty does not apply to a Part Manipulator determined to have been misused or abused, improperly maintained, or having defects attributed to the use of non-genuine repair parts.

Original pressure cylinders have a 3 year limited warranty from the date of purchase. When replacing one of the pressure cylinders, make sure not to scratch, mar, or nick the shaft or tube on either the old cylinder being replaced or the new cylinder being installed. All warranty cylinders must be returned to Midwest Specialties, Inc. for evaluation. The warranty is void if the cylinder to be evaluated shows signs of scratches or nicks on the cylinder shaft or tube. Damaged cylinders cannot be returned to the manufacturer for warranty claims. Replacement cylinders carry a limited 1-year warranty from the date of purchase.

Midwest Specialties, Inc. is not responsible for a customer’s air quality. We supply the basic tools and offer a coalescent filter option for those who have experienced excessive moisture and water. The responsibility for clean, dry air falls upon the customer.

The warranty is void if changes to the Part Manipulator, or attempts to repair it or its components are made without the expressed authorization of Midwest Specialties, Inc. The warranty is based on normal usage which would be the equivalent of a 40-hour work week.

For technical assistance or questions concerning the proper care and maintenance of the Part Manipulator unit, please contact Midwest Specialties, Inc. at 851 Industrial Drive, Wapakoneta, OH 45895.
SPECIFICATIONS

- The standard unit comes with Base, Angle, Arms, Pneumatic Cylinder Package, Pressure Cylinders, Joystick Control, Mount Block with Pivot Hook and Air Filter.
- Air pressure requirements are 90psi minimum to 120psi maximum.
- The lifting height is dependent on the load and air pressure.

OPTIONAL MAGNET SPECIFICATIONS

• Maximum Lifting Loads
  ▪ Flat Plate Mild Steel = 220 lbs (minimum thickness of .59 inches)
  ▪ Round Mild Steel = 99 lbs (maximum diameter of 5.9 inches)
• Maximum Length = 40 inches
• Maximum Diameter = 5.9 inches

INSTALLATION

IT IS IMPERATIVE THAT THE TABLE OR MOUNTING SURFACE BE LAGGED TO THE FLOOR AND SECURE BEFORE OPERATING THE PART MANIPULATOR.

1) Drill and tap (4) 3/8-16 bolt holes on a flat, smooth table or work bench. (see Base Mount diagram below)

INSTALLATION WITH PEDESTAL MOUNT

1) Secure the pedestal to the floor with (8) 1/2" diameter wedge anchor bolts drilled a minimum of 3-3/4" into the concrete

2) Secure the base of the part manipulator to the pedestal with (4) 3/8" bolts
OPERATING INSTRUCTIONS

1) Set the air pressure for the Part Manipulator to 90-120psi.

2) Using the flow control valves located on each end of the pneumatic cylinder (shown below), fine tune the extension and retraction speed for the cylinder stroke. Opening the valves (counter clockwise) will allow more airflow and increase the speed. Closing the valves (clockwise) will restrict the air flow and slow the stroke speed. It may be necessary to trial and error the flow control valves to reach the desired settings for a specific application.
3) The joystick control will give an output pressure that is proportional to the handle movement. Small joystick movement results in a small lifting movement, keep this in mind when fine tuning the flow control valves to the desired setting.

4) Pulling the joystick control lever toward the front of the Part Manipulator causes the arms to articulate downward. Pushing the joystick control lever toward the rear of the Part Manipulator causes the arms to articulate upward.

5) To remove the air cylinder first remove any weight from the front arms. Then raise the arms completely upward to the neutral position. At this point the air supply can be disconnected. Disconnect the air cylinder starting with the rod end that is attached to the arm.

6) When the Part Manipulator is not being used, the arms should be placed in the most upright position. This is the neutral position for the cylinders and will extend the cylinder life.

7) Always wear safety glasses, safety shoes, and use proper safety precautions when operating this unit.

Midwest Specialties, Inc. is not responsible for accident or injury resulting from the misuse of this machine or for use other than originally designed and intended.
