

IMPULSE® G+ & VG+
Series 4

Adjustable Frequency Crane Controls

THE NEXT GENERATION OF CRANE PERFORMANCE

MAGNETEK
MATERIAL HANDLING

THE NEXT GENERATION OF CRANE PERFORMANCE

INDUSTRY-LEADING SAFETY AND PERFORMANCE FEATURES COMBINE WITH OUR SUPERIOR APPLICATION EXPERTISE TO PROVIDE UNMATCHED PERFORMANCE.

IMPULSE drives are designed especially for material handling applications, providing a complete package of crane-specific capabilities far beyond a general purpose drive's functionality.

Safety features are integrated into every drive, preventing harm to the crane structure and crane equipment, and most importantly, creating a safe working environment for operators.

Magnetek's IMPULSE•G+/VG+ Series 4 drives continue our tradition of providing the most reliable and cost-effective adjustable frequency crane controls available. With hundreds of thousands of drives in operation backed by decades of experience, IMPULSE drives are the smart choice.

INDUSTRY-LEADING PERFORMANCE FEATURES

LOAD CHECK II™ continuously detects hoist overload conditions, halting upward motion and only allowing the load to be lowered. Load Check II continuously monitors the hook load, both during acceleration and constant speed, eliminating the need for load cells in most applications. It provides an auto-setup function which defines the hoist's maximum hook load in seconds. With these control advancements, the drive no longer pauses for tests unless rated capacity is approached, providing increased productivity.

SAFE TORQUE OFF provides a redundant hardware safety circuit that guarantees motor and brake power are removed when an E-STOP switch or safety controller opens the drive input, eliminating the need for external disconnects. This functionality is provided in a safety category 3 architecture and designed to PLd and SIL CL2 according to ISO/EN 13849-1 and IEC/EN 62061 respectively, meeting the requirements of IEC/EN 61508.

ADAPTIVE ULTRA-LIFT™ allows for hoist operation above base speed with a light load or empty hook. Adaptive Ultra-Lift continuously monitors motor torque and adjusts motor speed to operate at peak performance, improving plant safety and maximizing throughput. For example, motor speed can now be increased automatically when a magnet releases a load or gear ratios change with overwrapping drums.

BRAKE TEST verifies brake torque with the press of a button, capturing breakaway torque with a monitor parameter on the keypad. This valuable tool determines the condition of the brake so you can perform preventative maintenance and quickly commission the crane.

ANTI-SHOCK automatically stabilizes loads by detecting and minimizing rapid increases in motor torque, thus reducing the potential for crane damage caused by operator induced load shock.

QUICK-SETUP™ is provided by the easy-to-use keypad and X-Press Programming™ so you get up and running right away. X-Press Programming automatically configures several commonly used parameters and features when a control method, motion, or speed reference is selected.

SAFE LIFTING features are built right in, including Torque Proving, which confirms the motor is providing enough torque to safely lift a load prior to releasing the brake. Torque Limiting prevents the crane from performing a lift that could overload the motor and cause mechanical fatigue. Brake Integrity Check tests the primary and emergency brakes to ensure they are mechanically capable of holding the load.

OPTION CARDS provide the drive flexibility needed with expandable AC, DC digital and analog input and output option cards. Simplify automation and diagnostics integration with our EtherNet/IP, Modbus TCP/IP, PROFIBUS-DP, and PROFINET option cards. The new control power supply option maintains drive diagnostics, I/O, and communications when main power is disconnected from the drive.

IMPULSE•LINK DIAGNOSTIC SYSTEM maximizes the efficiency of your drive by providing easy parameter management right on your PC. IMPULSE•Link can communicate with up to 31 drives locally or wirelessly, allowing drive diagnostics, monitoring, and programming.

ENERGY ENGINEERED™ motion control products from Magnetek are designed to efficiently utilize available power, reducing energy costs for you and your customers.

RELIABILITY Magnetek drives are designed with reliability and economy in mind. The hardware and software were designed and extensively tested specifically for the operating conditions seen in overhead material handling applications. These durable drives feature new power modules that can withstand four times more thermal cycles than previous generations. Preventative maintenance monitors provide the feedback you need to proactively schedule maintenance and minimize downtime. IMPULSE•G+ & VG+ Series 4 drives are backed by our industry-leading three-year warranty.

Pictured is a common bus IMPULSE•G+ & VG+ Series 4 engineered control panel designed by Magnetek and installed on a cab operated hot metal crane. On the left of the panel are two IMPULSE•D+ HHP active front-end regeneration units that power the IMPULSE drives and regenerate AC power back to the grid. In the center of the control panel are our IMPULSE•G+ & VG+ drives and Braketronic® controls. On the right of the IMPULSE Series 4 drives is our MagnePulse™ DMC solid-state magnet controller.

CUSTOM CONTROL PANELS

Magnetek's custom control panels with IMPULSE•G+ and VG+ Series 4 drives provide the ultimate solution for overhead material handling. These panels are custom designed and built to your specifications to meet your exact application requirements. Our experienced engineering staff provides technical support and extensive overhead material handling expertise when quoting and designing your project. Custom panels are available with an unlimited number of configurations, components, and accessories.

COMMON OPTIONS INCLUDE:

- 120V control transformer and interface card*
- Brake contactor
- Built-in electronic motor thermal overload protection
- Clearly marked wires (at both ends)
- Wiring diagram
- NEMA 4/12 enclosure
- Enclosures for caustic and other environments
- Wiring for radio remote controls
- NEMA brake contactors
- Load and line reactors
- Air-conditioning or cooling fans
- Heaters and thermostats
- Door mounted keypads
- UL 508 certification

We can design a system to fit your application. Contact the factory for information.

*24 VDC, 24 VAC, and 42-48 VAC optional

KEYPAD WITH DIGITAL DISPLAY

Our user-friendly keypad gives you five lines of 16 characters each and includes soft keys and upgraded parameter selection. The display makes navigation and reading diagnostics even easier.

ALLOWS FOR:

- Programming various drive parameters
- Parameter back-up (store and copy)
- Monitoring functions of the drive
- Reading of alpha-numeric fault diagnostic instructions
- Remote monitoring

FEATURES

BENEFITS

SAFETY

| | |
|--|---|
| Brake Test* | Allows testing of available brake torque |
| Anti-Shock* | Minimizes harmful torque increases due to load shock, reducing potential for equipment damage |
| Encoder Loss Detection* | Signal loss detection at all times, even when the motor is not rotating (load float) |
| Snapped Shaft Detection* | Detects a broken coupling shaft or discontinuity in the drive train |
| Roll Back Detection/Torque Proving at Start/Brake Check at Stop* | Drive monitors brake functionality and motor torque at start and stop; the drive will maintain control of the load in case of a brake failure |
| Safe Operating Windows | Reduces the possibility of programming unsafe parameters |
| Load Check II™ | Continuously detects hoist overload conditions |
| Quick Stop™ | Reduces the possibility of load and crane collision |
| Slack Cable Detection | Provides annunciation of the slack cable condition to the operator |
| Multi-Level Password Protection | Limits unauthorized modification of drive parameters |
| Phase Loss Detection | In case of output phase loss, brake will set immediately, retaining load |
| Control Interface | Optically isolated quick disconnect 120 VAC control interface with parameter backup |
| UL/cUL Rated | Tested and listed by Underwriters Laboratory |
| Safe Torque Off | Redundant crane monitoring circuits can externally stop the drive to safety category 3 |
| Ground Fault Short Circuit Protection | Reduces damage to motor and drive |
| DC BUS Charge Indicator | Indicates when the DC BUS has discharged to a safe level |

PERFORMANCE

| | |
|---------------------------------------|--|
| Indexing* | Allows precise, programmed motor movement |
| Load Sharing* | Allows two or more mechanically coupled motors to be controlled in a master/slave torque control fashion |
| Hook Height Measurement* | Uses an incremental encoder signal to determine hook height from a calibrated position |
| Electronic Programmable Limit Switch* | Allows slow down and stop limits without a geared limit switch |
| Automatic Reset | Allows selectable conditions to be automatically reset with a new run command |
| Over-Torque/Under-Torque Detection | Allows programmable outputs and actions based on torque conditions |
| Slip Compensation | Automatically compensates for motor slip |
| Motor Lead Reversal | Electronically swaps motor leads for reverse operation |
| Keypad Copy | Copy, store, and write parameters to/from keypad |
| Communication | Built-in RS-485 communication (Modbus - RTU) |
| Static Auto-Tune | Allows auto-tune without mechanical disconnection |
| Enhanced Keypad Display | Easily navigate and read diagnostics |
| Load Float™* | Allows a load to be held aloft at zero speed without setting the electric brake |
| Weight Calculation* | Enables load weight to be calculated with an accuracy of $\pm 5\%$ of full load (0–10 VDC Output) |
| X-Press Programming™ | Allows programming initial setup in seconds |
| Swift-Lift™/Ultra-Lift™ | Allows overspeeding with light loads or empty hook |
| Reverse Plug Simulation™ | Allows operator to smoothly and quickly stop and change directions without setting parking brake |
| Stall Prevention | Extends acceleration time and prevents the motor torque limits from being exceeded |
| Micro-Speed™ | Allows operator to make precise, slow movements |
| Multi-Function Input Terminals | Set end of travel/slow down limits or other functions |
| Flash Memory | Stores last ten fault occurrences, even after power-down, for diagnostic purposes |
| Elapsed Time Counter | Indicates actual time of operation (power on or run time) |

RELIABILITY

| | |
|--|--|
| Preventative Maintenance Monitors | Perform drive maintenance before a failure to minimize downtime |
| Programmable Fan | Cooling fan on/off control selections for longer life |
| Ambient Compensated Overload | High ambient motor protection |
| Increased Drive Output Current Ratings | Designed for 2x longer life than previous models including 4x longer power module life |
| Built-in Auto-Tune | Maximizes performance and minimizes power leakage through (static or rotational) auto-tuning to extend motor life |
| Communications | Provides reliable digital link among various crane system peripherals, including Modbus RTU, PROFIBUS-DP, PROFINET, and Ethernet/IP, Modbus TCP/IP |
| Operation/Fault Display | Simplifies setup and troubleshooting |

* Features available on IMPULSE•VG+ only

SPECIFICATION VALUE AND INFORMATION

| | |
|--|---|
| Certification | UL, cUL, CSA, RoHS (CE available with filters) |
| Rated input power supply volts and frequency | 3-phase 200–240 VAC, 380–480 VAC, or 500–600 VAC; 50 or 60Hz |
| Allowable input voltage fluctuation | +10% or -15% of nominal, 3-phase |
| Allowable input frequency fluctuation | ±5% of nominal |
| Control method | Fully digital; sine-wave, V/F control, open loop vector control, flux vector control |
| Maximum output voltage (VAC) | Max output voltage 3-phase, 200/208/230/240/380/400/415/440/460/480/500/575/600V (proportional to input voltage) |
| Rated output frequency (Hz) | 0 to 150 Hz (consult factory for applications above 150 Hz) |
| Output frequency accuracy | 0.01% with digital reference command, -10° to 40°C; 0.1% with analog reference command; 10 bits/10V; 25°C, ±10°C |
| Frequency reference resolution | Digital: 0.0Hz; analog: 0.03Hz (at 60Hz) |
| Output frequency resolution | 0.0Hz |
| Overload capacity | 150% of rated load for 1 minute |
| Remote frequency reference sources | 0–10 VDC (20Ω); 4–20mA (250Ω); ±10 VDC; serial (RS-485) |
| Acceleration/deceleration times | 0.1 to 25.5sec — 4 sets; all independently adjustable |
| Braking torque | 150% or more with dynamic braking (optional) |
| Motor overload protection | Electronic thermal overload relay; UL recognized (I2T) |
| Overcurrent protection level (OC) | 200% of rated current |
| Circuit protection | Ground fault and blown-fuse protection |
| Overvoltage protection level | 410 VDC (230V), 820 VDC (460V), 1040 VDC (575V) |
| Undervoltage protection level | 190 VDC (230V), 380 VDC (460V), 475 VDC (575V) |
| Heatsink over temperature | Thermostat trips between 115–145°C |
| Four quadrant torque limit selection | Separate functions for FORWARD, REVERSE, and REGEN; all selectable from 0–300% |
| Stall prevention | Separate functions for acceleration, at-speed and constant horsepower regen |
| Other protection features | Speed deviation, overspeed, mechanical brake failure, lost output phase, lost input phase, failed-oscillator, PG-disconnect, mechanical overload, roll-back detection, internal braking transistor failure, and built-in watchdog |
| DC bus voltage indication | Charge LED is on until DC bus voltage drops below 50 VDC |
| Location | Indoors; requires protection from moisture, corrosive gases and liquids |
| Ambient operating temperature | 14° to 140°F (-10° to 60°C). Consult factory for high ambient applications |
| Storage temperature | -4° to 158°F (-20° to 70°C) |
| Humidity | 95% relative; noncondensing |
| Vibration | 1G for 10–20Hz 0.6G for 20–55Hz (2003–2180, 4001–4150, 5001–5077) 0.2G for 20–55Hz (2215–2415, 4180–41090, 5099–5200) |
| Elevation | 3300 ft. (1000 m) or less 9900 ft. (3000 m) or less with current derating |
| Safety standard | UL 508C |

CAPABILITIES

IMPULSE•G+ SERIES 4

RATINGS

200-240 VAC, 3.0 to 415A
(0.4 kW/0.75 HP to 110kW/150 HP)

380-480 VAC, 1.8 to 1090A
(0.4 kW/0.75 HP to 560kW/900 HP)

500-600 VAC, 1.7 to 200A
(0.75 kW/1 HP to 160 kW/200 HP)

CLASS OF SERVICE

CMAA Class A-F Service

AISE TR6 Class 1 to 4

ASME HST-4M H1 to H5

SPEED RANGE

40:1 in V/F Mode (15 preset V/F Patterns, 1 Adjustable)

200:1 in Open Loop Vector Mode

SPEED CONTROL METHODS

Up to 17 Distinct Speeds (Stepped)

2-Step Infinitely Variable

3-Step Infinitely Variable

Analog Signal (0-10 VDC, 4-20mA, ± 10 VDC)

Digital Pulse Train Input (32kHz max)

Radio Drive Serial Interface (RDSI)

PROGRAMMABLE TERMINALS

(8) 120 VAC Inputs (24 VAC, 42-48 VAC, or 24 VDC optional) Compatible with 50 Hz and 60 Hz

(3) Digital Dry Contact Relay Outputs (1A max @ 250 VAC, 1A max @ 30 VDC, Form A)

(1) Dedicated Fault Relay Output (1A max @ 250 VAC, 1A max @ 30 VDC, Form C)

(3) Analog Inputs (0-10 VDC and ± 10 VDC (20K Ω), 4-20mA (250 Ω))

(2) Analog Outputs (0-10 VDC and ± 10 VDC max current 2mA, 4-20mA (500 Ω))

(Consult factory for additional analog/digital input/output option cards)

APPLICATIONS

Worm Gear and Mechanical Load Brake Hoists

Traverse Motions

IMPULSE•VG+ SERIES 4

RATINGS

200-240 VAC, 3.0 to 415A
(0.4 kW/0.75 HP to 110kW/150 HP)

380-480 VAC, 1.8 to 1090A
(0.4 kW/0.75 HP to 560kW/900 HP)

500-600 VAC, 1.7 to 200A
(0.75 kW/1 HP to 160 kW/200 HP)

CLASS OF SERVICE

CMAA Class A-F Service

AISE TR6 Class 1 to 4

ASME HST-4M H1 to H5

SPEED RANGE

1500:1 in Flux Vector Mode

SPEED CONTROL METHODS

Up to 17 Distinct Speeds (Stepped)

2-Step Infinitely Variable

3-Step Infinitely Variable

Analog Signal (0-10 VDC, 4-20mA, ± 10 VDC)

Digital Pulse Train Input/Output (32kHz max)

Radio Drive Serial Interface (RDSI)

PROGRAMMABLE TERMINALS

(8) 120 VAC Inputs (24 VAC, 42-48 VAC, or 24 VDC optional) Compatible with 50 Hz and 60 Hz

(3) Digital Dry Contact Relay Outputs (1A max @ 250 VAC, 1A max @ 30 VDC, Form A)

(1) Dedicated Fault Relay output (1A max @ 250 VAC, 1A max @ 30 VDC, Form C)

(3) Analog Inputs (0-10 VDC and ± 10 VDC (20K Ω), 4-20mA (250 Ω))

(2) Analog Outputs (0-10 VDC and ± 10 VDC max current 2mA, 4-20mA (500 Ω))

(1) Single line driver/open collector encoder option card with 5/12 VDC (200mA) power supply

(Consult factory for additional analog/digital input/output option cards)

APPLICATIONS

Non-Mechanical Load Brake Hoists

Traverse Motions (Consult factory)

CUSTOMIZATION OPTIONS

INTERFACE CARDS

Optically-isolated interface of 8 digital inputs (binary), 3 Form A dry contact digital outputs, 1 Form C dry contact fault output, 3 analog inputs, 2 analog outputs, pulse input and feedback, and RS-485 Modbus RTU interface.

DIGITAL INPUT OPTIONS

120 VAC/50Hz & 60Hz
42-48 VAC/50Hz & 60Hz
24 VAC/50Hz & 60Hz
24 VDC

INPUT/OUTPUT OPTIONS

ANALOG INPUTS

(13 Bit + Sign) – Interface of 3 high resolution analog inputs to the drive. Signal levels (individually selectable): 0 to +/- 10 VDC (20kOhm) or 4 to 20mA (500 Ohm).
Input resolution: Voltage (1/8192), Current (1/6654).

AC DIGITAL INPUTS

(4 Channels) – Optically-isolated interface of 4 digital inputs (binary) to the drive.

OPTIONS

120 VAC/50Hz & 60Hz
42-48 VAC/50Hz & 60Hz
24 VAC/50Hz & 60Hz

INPUT/OUTPUT OPTIONS (CONTINUED)

AC DIGITAL INPUTS & OUTPUTS

(4 Channels) – Optically-isolated interface of 4 digital inputs (binary) to the drive and 4 1A Form A dry contact relay outputs.

OPTIONS

120 VAC/50Hz & 60Hz
42-48 VAC/50Hz & 60Hz
24 VAC/50Hz & 60Hz

DC DIGITAL INPUTS

(16 Channels) – 24 VDC optically-isolated interface of 16 digital inputs (binary) to the drive.

ANALOG OUTPUTS

(11 Bit + Sign) – Two signals for remote metering of any two of the drive's "U1" monitors and is additive to the two standard analog outputs. Signal level: 0 to +/- 10 VDC (20kOhm).

DIGITAL OUTPUTS

(8 Channels) – Eight additional digital outputs for use in monitoring the status outputs of the drive. Signal levels: 2 channels of Form A, 250 VAC, 30 VDC, 1A and 6 channels of PHC, 48 VDC, 50 mADC, Shared Common.

CONTROL OPTIONS

SINGLE ENCODER—LINE DRIVER

Providing velocity and direction feedback from an encoder, this option is used for motor speed feedback in closed loop flux vector control. A 5 VDC buffered output is also included. Signal levels: 5 or 12 VDC differential line driver with compliments, maximum input frequency of 300kHz, phases A and B.

SINGLE ENCODER—OPEN COLLECTOR

This option provides velocity and direction feedback from an encoder and provides motor speed feedback in closed loop flux vector control. A 24 VDC buffered output (open collector) is also included. 32kHz maximum input frequency.

24 VDC CONTROL POWER UNIT

This option provides board-level component voltages for the drives when provided with 24 VDC from an external, customer-supplied source. It is used to maintain both drive control power and network communications (when utilized).

IMPULSE SERIES 4 REMOTE OPERATOR KIT

The IMPULSE Series 4 Remote Operator Kit allows the LCD Operator to be mounted to an enclosure door. The kit includes one LCD Operator, one mounting bracket, and one RJ-45 cable.

USB COPY STICK

The USB Copy Stick allows the drive to connect to the USB port on a PC. It can read, copy, and verify drive parameter settings from one drive to another like drive.

USB Copy Unit Kit Contents:

- 1 – USB Copy Unit (Y-Stick)
- 1 – 1 ft. USB Cable to connect PC to Y-Stick
- 1 – 3 ft. Cable with RJ-45 connector on both ends to connect Y-Stick to drive

Driver: USB Copy Stick Driver*

*Note: This driver is required to be installed on the PC before the Copy Stick can be used.

NETWORK COMMUNICATIONS OPTIONS

ETHERNET/IP

Allowing for communication over 10/100Mbps Ethernet networks, this option has the ability to configure the IP address from a user specified IP address, from a DHCP host, or from a BootP host. All parameters, diagnostics, and operational commands are accessible via EtherNet/IP.

MODBUS TCP/IP

This option complies with the Modbus TCP/IP protocol specification and allows for Modbus communication over 10/100Mbps Ethernet networks. The IP Address can be configured from a user specified IP address, from a DHCP host, or from a BootP host. All parameters, diagnostics, and operational commands are accessible via Modbus TCP/IP. Up to 10 simultaneous PLC/PC connections are supported.

PROFINET

This option complies to PROFINET I/O device and PROFIDrive profile specifications. It allows connection to a PROFINET network and facilitates the exchange of data via a simple networking solution that reduces the cost and time to wire and install factory automation devices, while providing interchangeability of like components from multiple vendors. This is a PROFINET Conformance Class A certified interface.

PROFIBUS-DP

This option complies with the Profibus-DP protocol specification. All parameters, diagnostics, and operational commands are accessible via Profibus. The option board provides a 9-pin (F) type D-Sub connector for easily connecting to a standard Profibus-style, shielded twisted-pair cable. Each Profibus network supports up to 99 drives. All of the Profibus data rates from 9.6Kbps to 12Mbps are supported. The option is configured using parameters within the drive, which allows for easy configuration eliminating the use of hardware switches. Status LEDs are viewable through the front cover, and a monitor has been added to allow for improved diagnostics.

DIAGNOSTICS AND DRIVE SUPPORT TOOLS

IMPULSE•LINK DIAGNOSTIC SOFTWARE

- Parameter Management
- Drive Monitor
- DataLogger
- Drive Trending Tool

DATALOGGER SERIES 4

- Easily access Run, Alarm, and Fault histories, drive parameters, and drive trending data
- View data and analysis via the LCD scrolling display or on your PC
- Compatible with IMPULSE® Series 4, Series 3, and G+ Mini drives

CRANE MONITORING

IMPULSE G+/VG+ drives can be the cornerstone of an automated material handling system providing advanced diagnostic capabilities including:

- Human Machine Interface (HMI)
- Peripheral Equipment Interface
- Workflow Monitoring
- Material Tracking
- Wireless Data Transfer
- RF Communication

Our highly trained team can assess your application and offers solutions to enhance system diagnostics, prevent equipment damage, and simplify maintenance, troubleshooting, and overall operation.

CUSTOM APPLICATION SOFTWARE

Our software will save you money by eliminating the need for a PLC or additional external logic.

These software applications can be added to our already robust IMPULSE drives to meet your unique application requirements.

FOOTBRAKE/STATIC STEPLESS
SIMULATION SOFTWARE

BUCKET CONTROL SOFTWARE

WEIGHT MEASUREMENT SYSTEM
(WMS) SOFTWARE

DRIVE SYNCHRONIZATION SOFTWARE

SWAY CONTROL SYSTEM (SCS®) SERIES 2

FOOTBRAKE/STATIC STEPLESS SIMULATION SOFTWARE

This software is designed for use on traverse motions to provide an effective means to slow or stop the motion of the bridge or trolley. Encoder feedback is used to determine bridge or trolley speed at all times, allowing the operator to smoothly re-initiate a run command to a coasting crane. This prevents the jerking motions and slow responsiveness found with acceleration and deceleration ramps.

Improved torque control ensures a smooth transition from coasting to slowing down and is non-destructive to the controls or the crane itself. As more torque is applied, the crane will accelerate or decelerate faster. An optional input to the drive while the footbrake is applied prevents the motor from driving into the brake, saving wear and tear.

APPLY THIS SOFTWARE TO:

- New or existing cab controlled cranes
- Existing hydraulic brakes
- Footbrakes
- Static stepless retrofits
- Braketronic®

STATIC STEPLESS SIMULATION SOFTWARE:

- Eliminates current spikes and excess mechanical torque/stress on the drive train and allows quick but smooth starting or changing of direction
- Reduces maintenance costs, with fewer moving parts that wear and require replacing, like contactor tips, brake pads, etc.
- Provides higher reliability with digital technology
- Improves diagnostics and troubleshooting of any fault and alarm conditions with the keypad, fault history, DataLogger, and IMPULSE•Link for diagnostics and support tools
- Interfaces to the Induction Master joystick with IVM Board, making a retrofit easy
- Gives operators ultimate control and the same feel to which they are accustomed
- Utilizes standard squirrel cage motor or existing wound rotor

BUCKET CONTROL SOFTWARE

SAVE TIME AND MONEY WITH OUR BUCKET CONTROL CUSTOM SOFTWARE

This custom software can be used with IMPULSE•VG+ Series 4 drives to control multi-line clamshell or grapple buckets that utilize a loading/closing hoist. Although the open and hold drives operate independently, the software lets you control the various motions of the bucket without the need for a PLC.

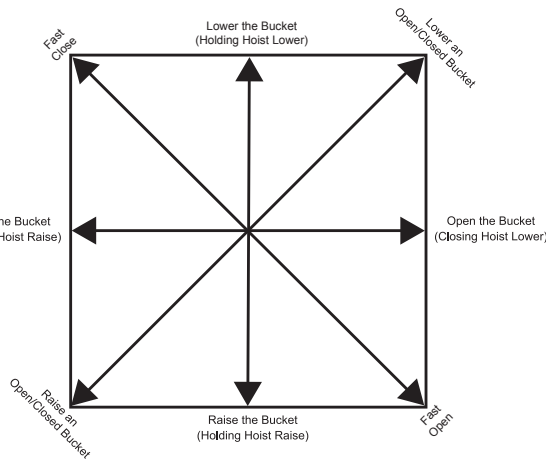

It features Bucket Position Indication, which provides the operator with the open/close status of the bucket while dredging (underwater) or when the bucket is not visible. This is done via analog output from the closing hoist and is received by an analog meter or by an MMI.

No communication (such as master/slave) is needed. In order to maintain the bucket in the open position while lowering, both hoists must operate at the same speed. In order to keep a full bucket closed while raising it out of the pile, torque must be proportionally shared between the two hoists.

USE BUCKET CONTROL SOFTWARE* TO:

- Lower an open bucket
- Close the bucket on a pile
- Raise a closed bucket
- Raise an open bucket
- Perform horizontal winch applications

* Requires a Uni-Polar Analog Master Switch or Multi-Step Digital Speed/Torque References

WEIGHT MEASUREMENT SYSTEM (WMS) CUSTOM SOFTWARE

Weight Measurement System (WMS) combines the functions of Load Summing and Weight Measurement II in a convenient single custom software. WMS can be used with IMPULSE•VG+ Drives* to measure and sum loads across multiple hoists without the need for a PLC and detects overloads on individual or multiple hoists.

WEIGHT MEASUREMENT II:

- Calculates a load weight based on motor torque
- Provides an alternative to a load cell (where absolute precision isn't needed)
- Continuously takes measurements while lifting without pausing
- Detects hoist overload — configurable warning and fault points can be set
- Displays weight on a score board, PLC, or radio remote control screen via analog signal
- Easily enabled or disabled via a digital input

* Consult factory about retrofitting onto existing equipment.

LOAD SUMMING:

- Configures each hoist as a percentage of total crane capacity
- Each drive inputs the load sum from the previous drives, adds its own measured weight, and then passes the total to the next drive via an analog output. Any drive in the system will fault if the total is above the set threshold
- Communicates between hoists via analog I/O
- Displays a summed weight on a score board, PLC, or radio remote control screen via analog signal
- Can accept an analog input from an actual load cell

BENEFITS:

- Offers increased safety by preventing a lift from overloading the crane system
- Prevents wear and tear on equipment
- Prevents damage to the crane structure
- Saves time and money by eliminating the need for a PLC or additional hardware

DRIVE SYNCHRONIZATION SOFTWARE

SYNCHRONIZATION SOFTWARE MAKES IT EASY!

This custom software allows you to synchronize multiple IMPULSE•VG+ Series 4 drives. The slave drives utilize an encoder option board with two encoder inputs and monitor both its own encoder feedback AND the master's encoder feedback, while also sending timing status information back to the master. The slave compensates for any position errors by adjusting its motor speed, resulting in near-perfect alignment between the master and slave motor shafts. The slave drive also possesses the ability to automatically re-synchronize the motors and has an electronic gearing feature. While both drives are running, there is no accumulation of position error, so alignment is always maintained.

YOU CAN:

- Operate a multiple hoist application independently or synchronized
- Synchronize a cable reel to a hoist
- Synchronize multiple trolleys on a single bridge
- Synchronize multiple motions between 2 or more cranes

DRIVE SYNCHRONIZATION SOFTWARE:

- Offers increased safety by precisely controlling motion and preventing the operator from making an uneven lift
- Saves time and money by eliminating the need for a PLC
- Increases productivity because the operator does not need to level the hoists manually

DRIVE SYNCHRONIZATION SOFTWARE* MAY BE APPLIED ON:

- Speed matching – two or more independent systems, such as independent hoists, bridges, or trolleys that are not mechanically linked or bound together
 - System needs to be able to correct error without being mechanically bound (i.e. through the wheels of an end truck)
- Bridge applications where two synchronized motors are driving opposite end trucks (does not automatically compensate for skew)

PERFORMANCE FEATURES

BENEFITS

Position error stored at power down

Motions can be automatically re-synchronized even after a power down, without the need for re-homing or calibrating synchronized hook offsets

Multiple gear ratios

Allows motions with different hook speeds, like gearing, and encoder PPRs

Advance/retard function

The user can very easily fine position one or multiple motions

Availability of software features

Standard crane & hoist software features (such as Adaptive Ultra Lift™, Load Check II™, Weight Measurement & more) are available even while utilizing the Drive Synchronization software. Must be specified at the time of order

Drive synchronization software should NOT be applied on:

- Load sharing applications with two or more mechanically coupled systems. This includes directly coupled motor shafts, trolleys, or bridges that are mechanically coupled together or two or more motors that are indirectly tied together through a structure, such as a bridge or trolley.
- Driving two or more wheels on the same rail, such as the swing motion on a log handling crane, or a bridge motion on a polar crane. In these cases, the "Load Share" feature within Magnetek's standard IMPULSE Crane & Hoist software is a better solution.

*Note: Because customers may not be familiar with programming application specific software of this nature, Magnetek strongly recommends and may in some cases require that the purchaser use Magnetek's Field Service Personnel for initial startup as part of the purchase. Please consult factory for additional information.

SWAY CONTROL SYSTEM (SCS®) SERIES 2

ENHANCE CRANE OPERATION WITH MAGNETEK'S SWAY CONTROL SYSTEM

This custom software is embedded in our IMPULSE•G+ Series 4 variable frequency drives for new or existing crane control systems without the need for external programmable logic controllers or costly height measurement devices.

SCS SERIES 2 BENEFITS:

- Improves productivity by allowing the crane operator to concentrate on load engagement/disengagement rather than focusing on minimizing load swing. The system also improves the accuracy of load placement
- Reduces material damage caused by incidental contact of swinging loads
- Enhances safety in operations and reduces the potential for personnel injuries and damage to equipment
- Reduces maintenance costs and downtime by decreasing stresses on structural, mechanical, and control components

SCS SERIES 2 HAS BEEN DESIGNED TO:

- Require only one IMPULSE Variable Frequency Drive (VFD) per traverse motion with SCS software. Additional IMPULSE VFDs are connected in a Master/Slave fashion
- Operate in V/f, Open Loop Vector, and Flux Vector control methods
- Be compatible with existing master switch and radio control configurations such as Multi-step and Infinitely Variable Uni-polar/Bi-polar analog
- Eliminate the need for an external programmable logic controller
- Accept a hook height measurement when combined with an IMPULSE•VG+ Series 4 hoist drive
- Eliminate the need for a high maintenance feedback device such as an absolute encoder. The system can also be configured to operate in an operating hook height zone
- Work with multiple hoists on the same bridge

PERFORMANCE FEATURES INCLUDE:

- Optional inputs available to fine tune the pendulum length when using multiple below the hook attachments or varying load sizes
- Automatic hook height measurement when combined with an IMPULSE•VG+ Series 4 hoist
- Seamless integration with special functions within IMPULSE variable frequency drives such as Micro-Speed™ and Reverse Plug Simulation™, end of travel slow down, and stop limits
- Enabling or disabling with the flip of a switch

YOUR ONE-STOP SOURCE FOR MATERIAL HANDLING CONTROL SOLUTIONS

Magnetek offers customers unmatched application expertise and one-stop shopping for their material handling control solutions; solutions that allow them to improve system through-put, save energy, and increase safety.

ENGINEERED SYSTEMS & SOLUTIONS

Our highly trained team assesses your application and offers solutions to enhance system diagnostics, prevent equipment damage, and simplify maintenance, troubleshooting, and overall operation.

IMPULSE® AC ADJUSTABLE FREQUENCY DRIVES

OMNIPULSE™ DC DIGITAL DRIVES

VARIABLE SPEED MOTOR CONTROL PANELS

MOTORS & ACCESSORIES

POWER DELIVERY SYSTEMS

FESTOON SYSTEMS AND CABLE

PENDANT PUSHBUTTON STATIONS

RADIO REMOTE CONTROLS

COLLISION AVOIDANCE SYSTEMS

BRAKES

UNSURPASSED PRODUCT SUPPORT

You can count on Magnetek and IMPULSE drives to help you achieve the maximum performance and reliability of your overhead material handling systems. Support includes:

- Three-year warranty on IMPULSE drives
- Magnetek Service Technicians on call 24/7/365
- On-site and in-house product training programs
- Full testing prior to shipment
